

5G

Optimizing 5G opportunity

November 2020

Mobile broadband enabling digital India

India leapfrogging to being among

Largest
Subscriber Base

Highest
data Consumption

Lowest price per GB
(1/4th of cost in China)

Use technology to differentiate & leapfrog into future

India's best in class 4G network – scale & performance

- Highest amount of spectrum deployed in 4G network
- More than 200K 4G sites
- India's only network with peak speed of 500Mbps
- First 4G with carrier aggregation & LAA
- First network with wide scale Massive MIMO
- First network with open vRAN deployment

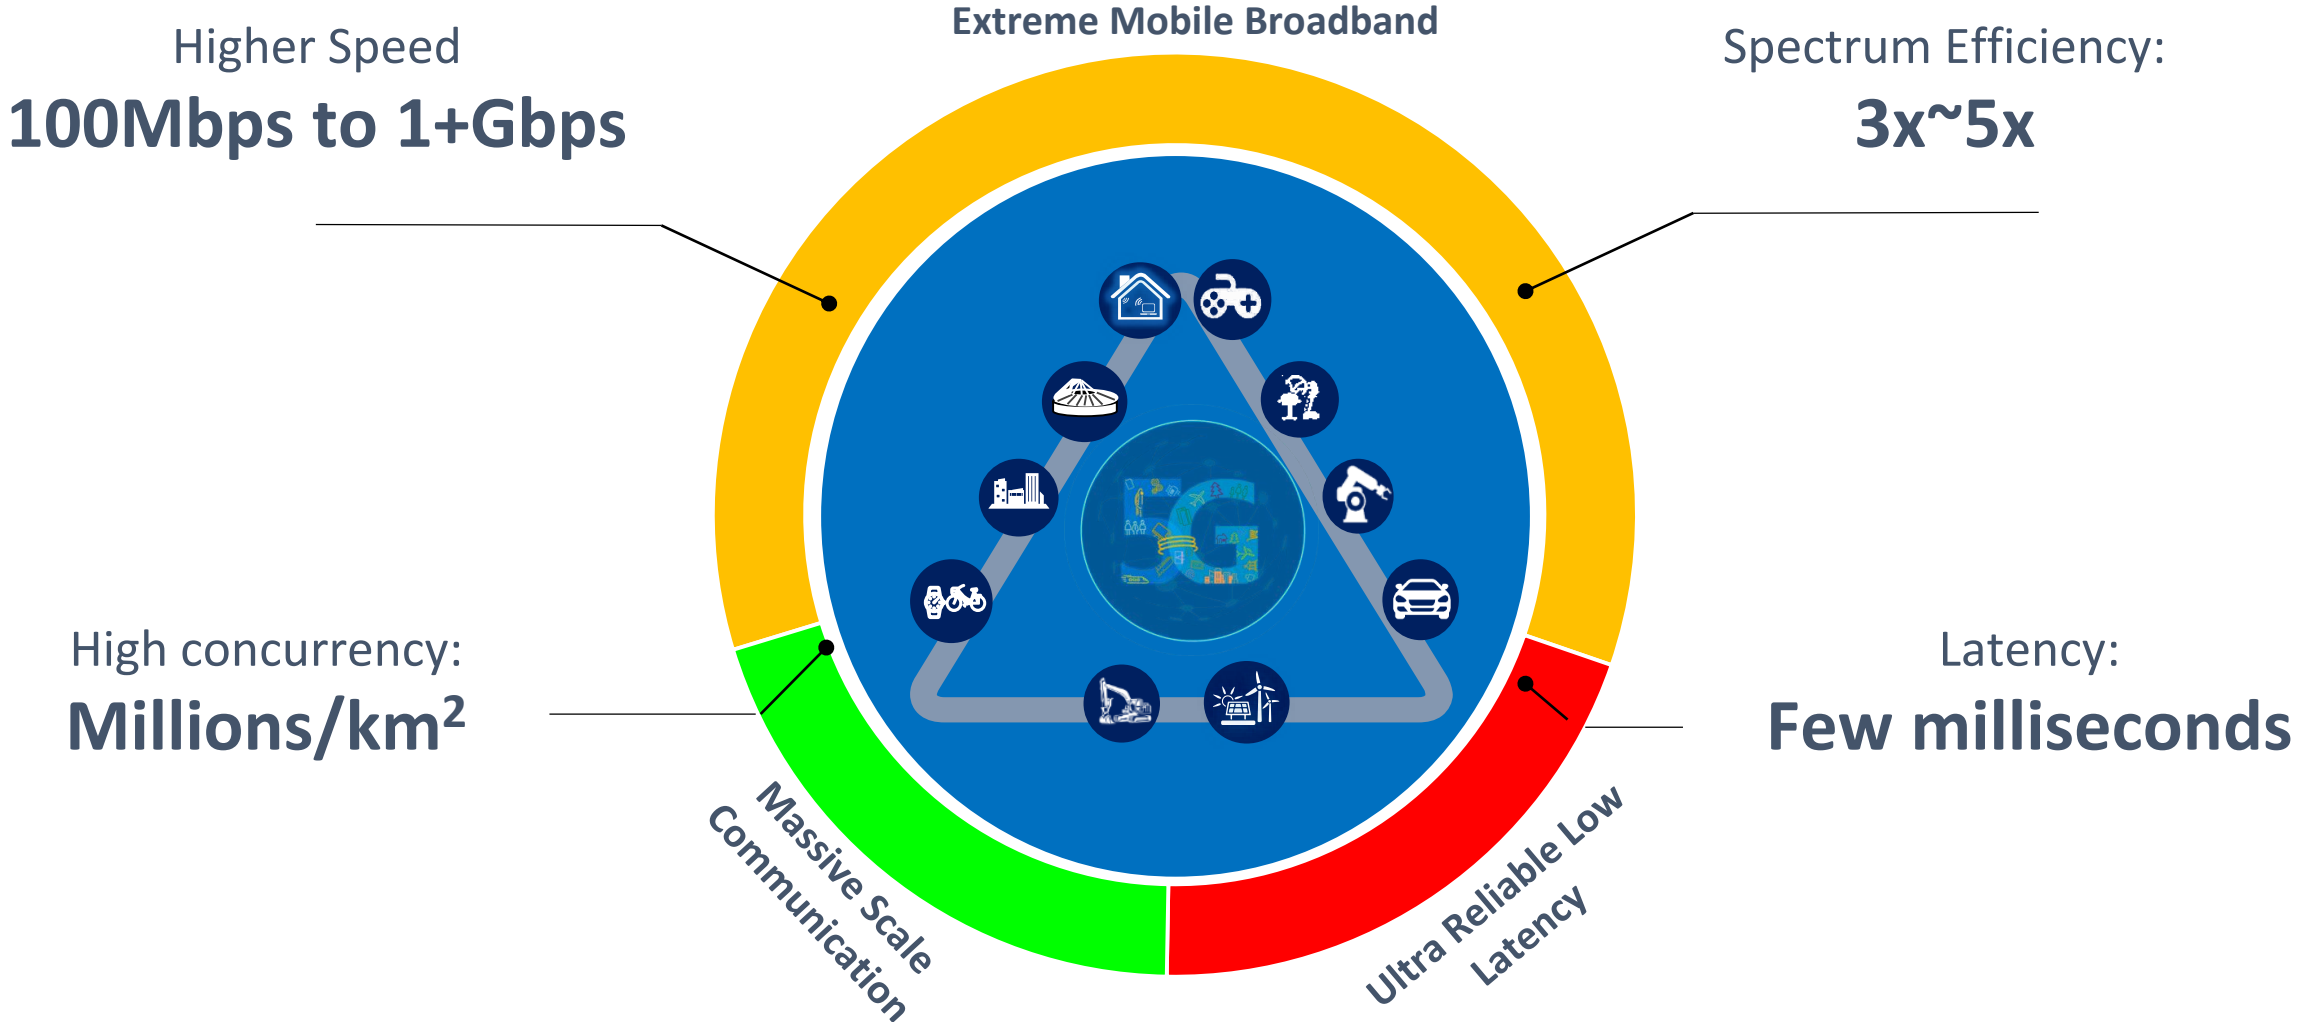

4G network ready to deploy 5G network

Delivering best in class customer experience

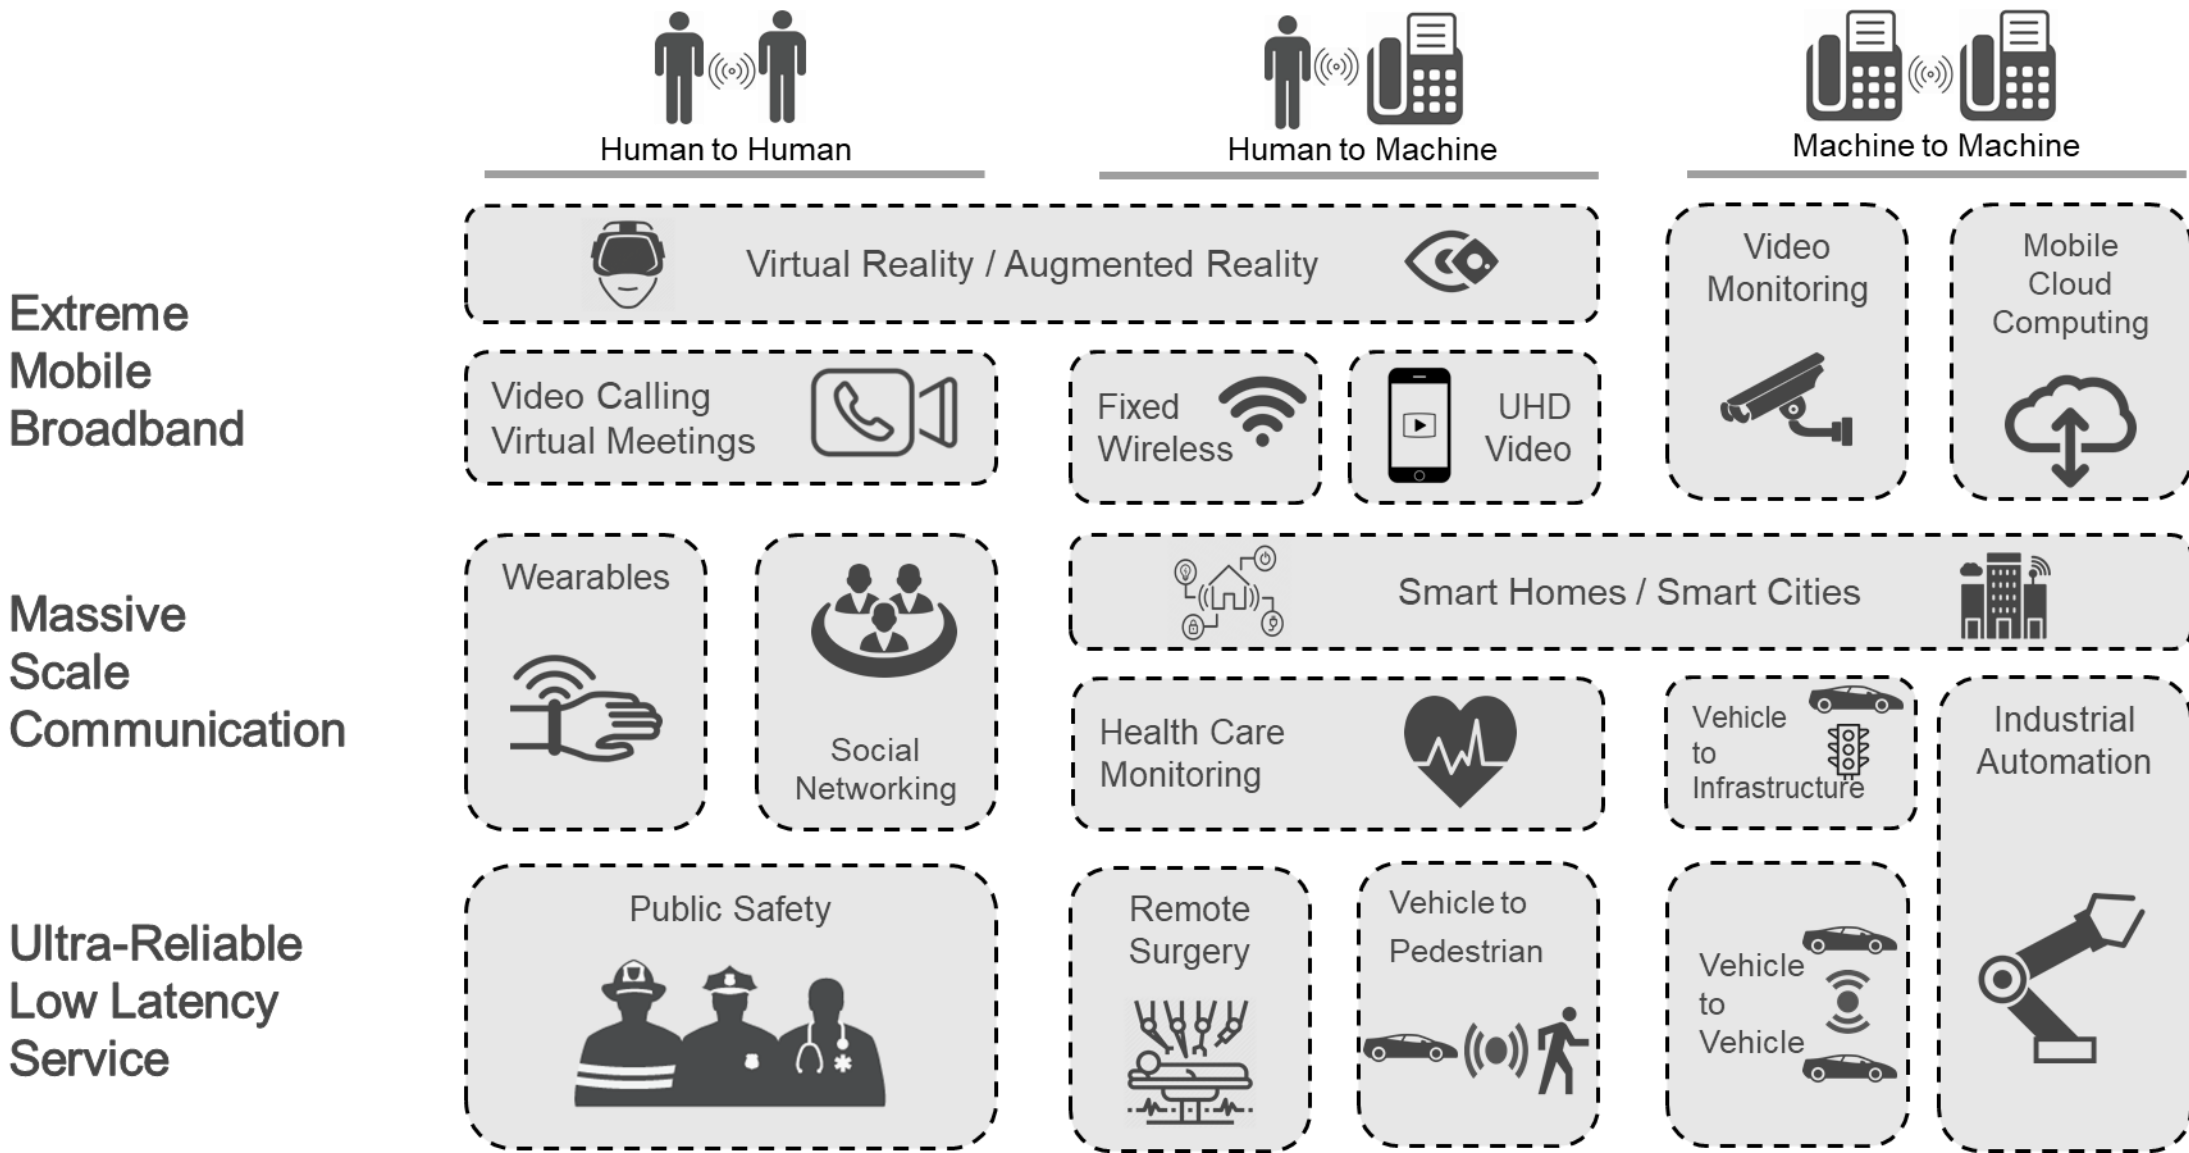

Rated as India's best mobile broadband network

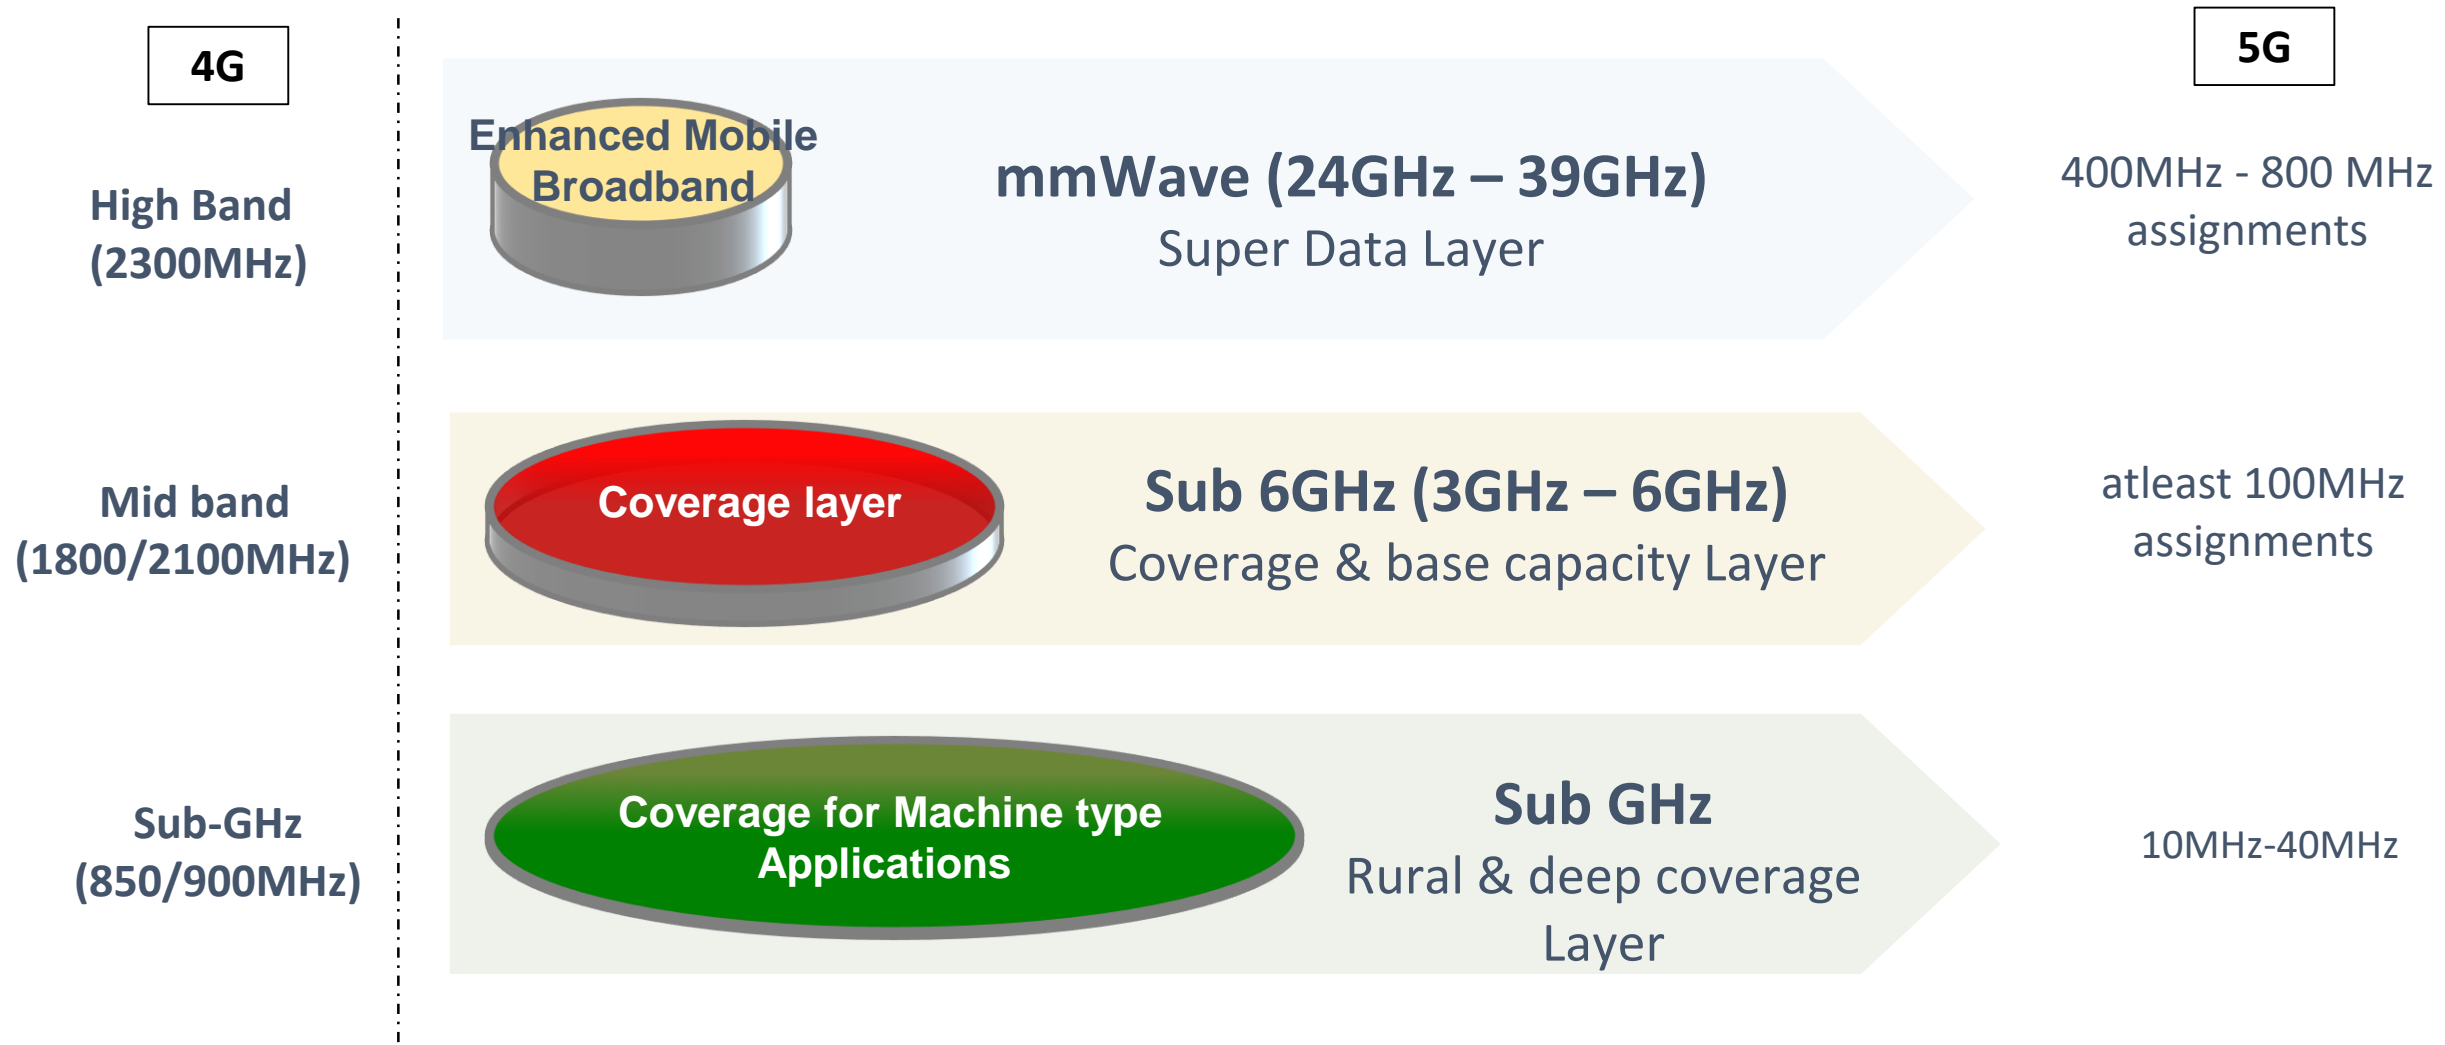

5G will set the stage for Industry 4.0

Several use cases in the long term

Spectrum: Critical for 5G networks

Need sufficient spectrum in all three bands must for 5G success

Success factors for 5G in India

5G: Three key building blocks

Network

Globally harmonized standards

Devices

Affordable devices

Applications

AR/VR Media

Surveillance

Industrial Robotics

Remote Surgery

Cloud Gaming

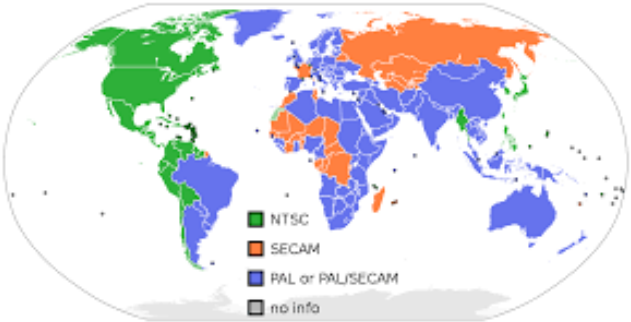

Drone Delivery

Apps for local use cases

Localized standards are not sustainable

Standardized by digital streaming

Standardized by 3GPP

Islands of technology / standards fail to get global economies of scale

open ecosystem thrives on global standards

Open Standards

Open Ecosystem

<i>Airspan</i>	ALTIOSTAR	AT&T	aws	CISCO
COMMSCOPE	dish	FUJITSU	Google	IBM
intel	JUNIPER NETWORKS	MAVENIR	Microsoft	NEC
NewEdge Signal Solutions	NTT	ORACLE	Parallel WIRELESS	Qualcomm
Rakuten Mobile	SAMSUNG	Telefonica	usignite	verizon

Open & globally harmonized standards drive open ecosystem

Common smartphone / infrastructure drives cost down for services (e.g. 2G & 4G)

Spectrum allocation being done across the globe

* Planned

		mmWave	Sub-6GHz	Sub-GHz
USA		1,600 MHz	800 MHz	35 MHz (600MHz band)
China		8,000 MHz*	460 MHz	-
Korea		2,400 MHz	280 MHz	-
Japan		1,600 MHz	700 MHz	-
Australia		3,250 MHz	300 MHz	
India		To be identified	175MHz	To be identified

Current spectrum is abysmally low & reserve price is abnormally high

mmWave: Critical for scaling 5G networks

Source: GSA

mmWave : Contribution to India's economy

India needs 4GHz to 6GHz of spectrum in mmWave

Connectivity: Accelerate fiber rollouts for 5G

1.5 million
BTSs

0.5 million
Towers

1.5 million km
Fibre

25%
Towers connected
with fibre

**Need ROW & instant govt. permissions, unbundling fiber assets
Allocation of e-band spectrum for “Wireless fiber”**

Building local applications for digital India

#1 Fixed Wireless Access

Broadband Access to
160M Indian Households

#2 Cloud Services

4K Infotainment, AR/VR Education &
Immersive Experience

#3 Digital Sky

Drone for Crop Analysis,
Smart Irrigation, Logistics, Survey

#4 Wireless eHealth

Bringing Specialized Healthcare to
Rural India

#5 Smart Manufacturing

Increased economic output

#6 Tele-Operated Driving

Automated mining

#7 Reshape Broadcasting

Mobile connected camera &
alternative for satellite vans

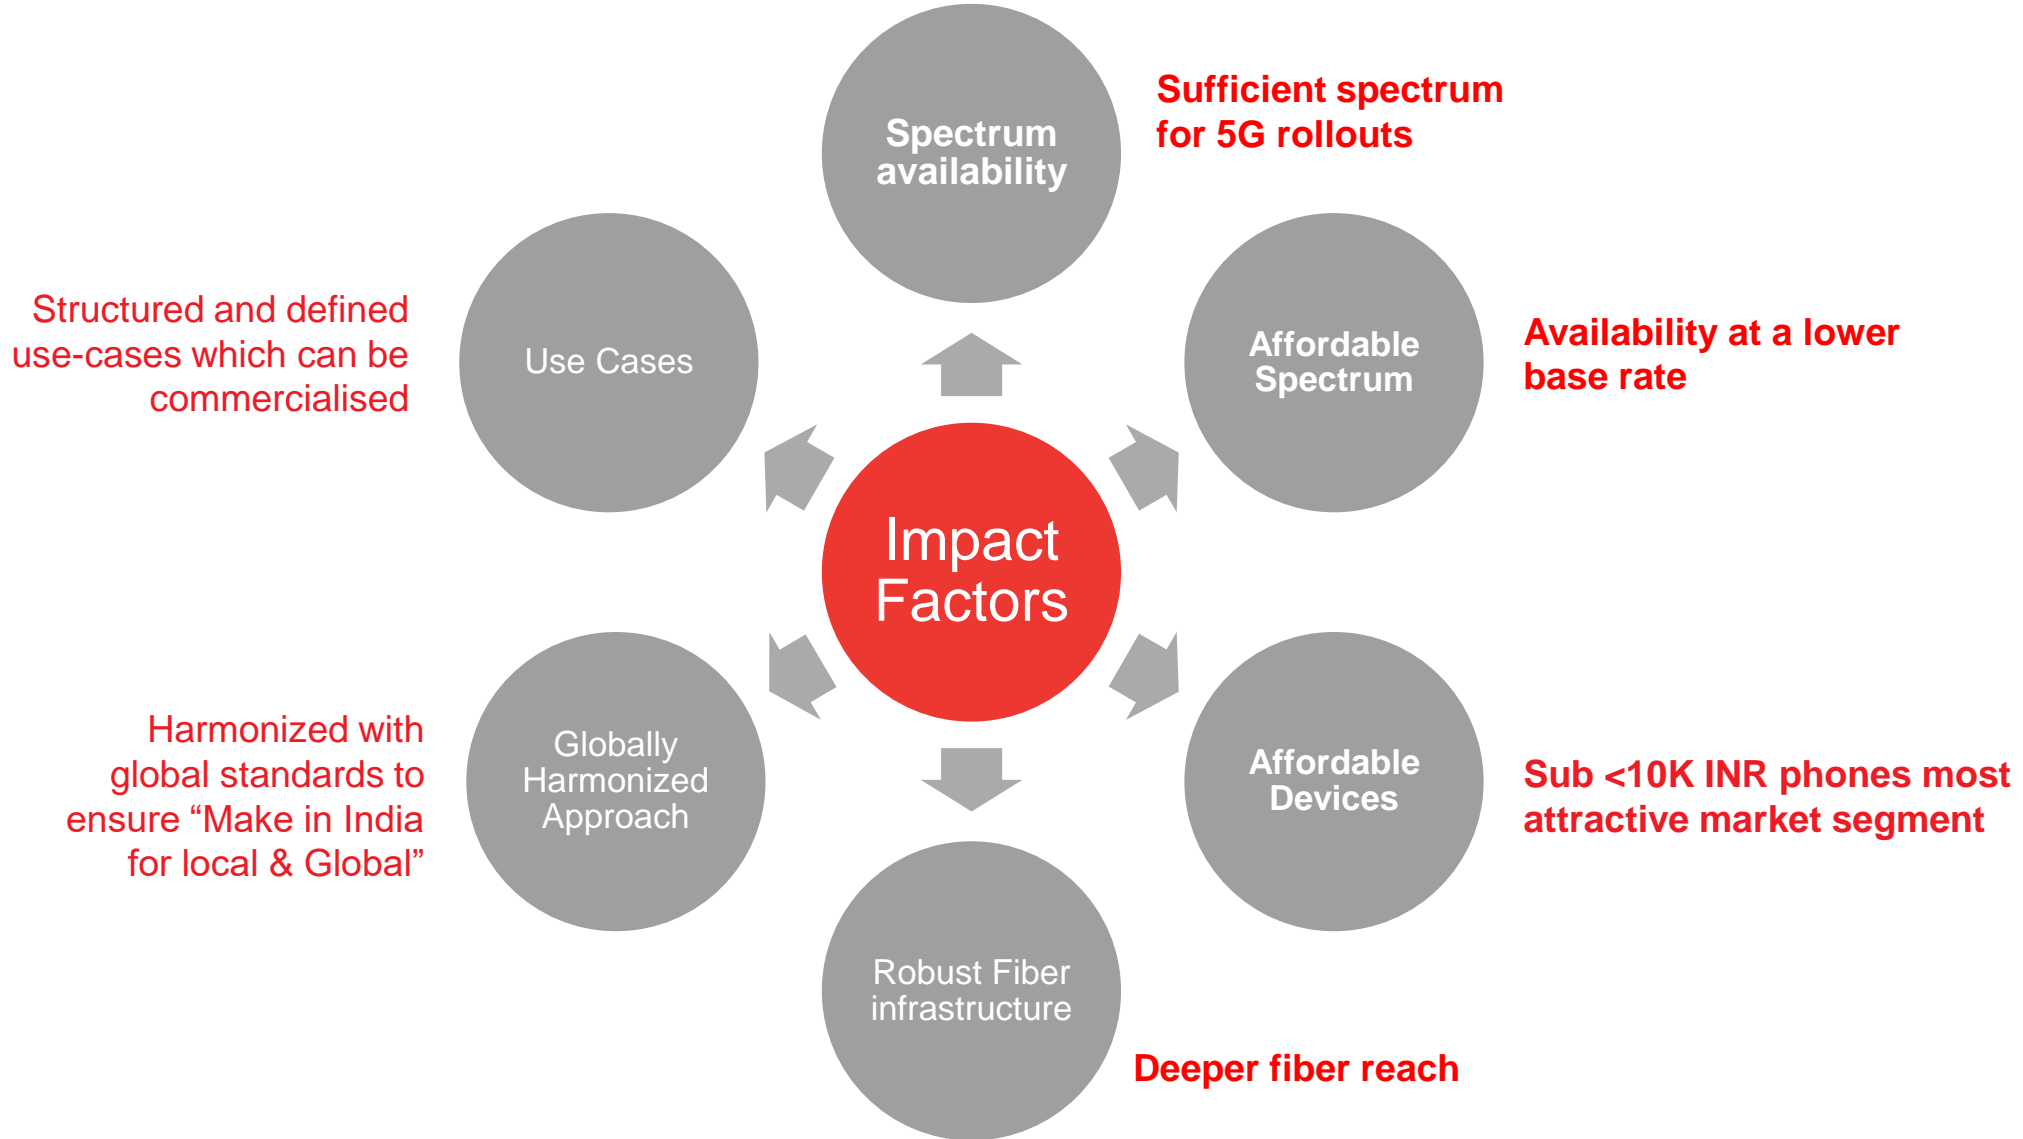

#8 Smart City

100 Cities, Smart Utilities by
Connectivity and Digitalisation

Need applications & use cases to leverage 5G capabilities

5G in India | Critical success factors

Thank You
