Fixed Broadband is the Key Infrastructure for Future

Strategy 2020, Triple Play, 100% coverage
 FCC:100M for 100% Coverage before 2020
 Connect rural areas with BB connectivity
 50M, 75% 2014;2018 100%
 7.2 Billion USD Credit to 100% coverage
 Digital UK, 100% BB coverage till 2012

NBN, 12M above, 90% with 100M, FTTH
 Cover 25 cities up to 75% population
 i-Japan Strategy 2015,in excess of 100Mbps
 KII-P/G/T, U-Korea, FTTH 2010
 HSBB, 10M above
 iN 2015, 100M-1G

Incumbent

Mobile operators

Emerging operators

MSO/ISP

Digital Agenda for Europe (DAE) targets:

- 100% of population be covered by broadband above 30 Mbps by 2020
- 50% of population to subscribe to broadband above 100 Mbps by 2020
- The full implementation thereof is expected to contribute to the increase of the EU GDP by 5% and to the creation of 3.8 million new jobs

FBB Development in China past 10 years

Mainstream BW

<8M

8M

20M

50M

100/200M

1000M

- In the past 10 years, FBB sub has increased from 95M to 418M in China. In the same duration, FTTH/O ratio has reached 90.9% in Y2019.
- With the main stream FBB developed from 8M to 200M while the 1000M FTTH service has started.
- China Mobile 157m (in 4 years), China Telecom 146m, China Unicom 81m.

Key Words of NG Platform: **Future-Proof, Convergence, Virtualization**

ZTE

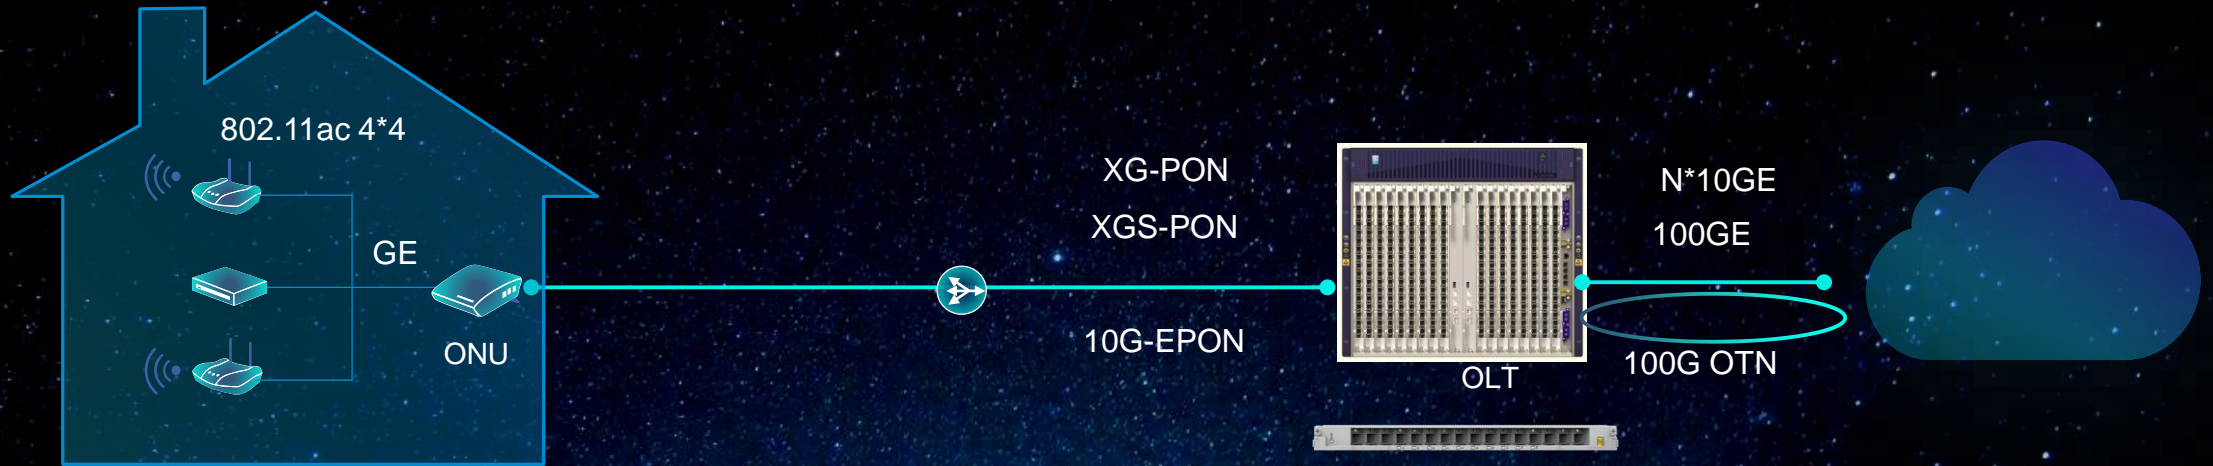

A Big Step Forward for **Speed**: XG(S)-PON is Ready for Rollout

1 Giga @Home

10 Giga @Access

100 Giga @Aggregation

GE Connection @Home

10Giga for Access Network

100G uplink for Aggregation

- **Innovative 4-in-1 ASIC chip** provides programmable capability and its power consumption is 50% lower than CoC V5.0
- ZTE 10G PON with TITAN has been **largely commercial used** in China Telecom
- The accumulative shipment of ZTE 10G PON is now more than **1.3 Millions PON ports**

Combo PON Helps a Smooth Migration to 10G PON

Compatible with the 16-port GPON for smoothly upgrading to 10G PON.

16 ports XG(S)-PON & GPON Combo

3-rate Combo PON

Benefits

- **Less room spaces:**
No Need for external WDM1r with 10G PON OLT
- **Reduce 1.5 dB insertion loss:**
Increase enough optical power margin
- **Simplify fiber routing:**
Reorganizes the ODF fiber routing
- **Easy management:**
Unify two sets of Management of GPON and 10G PON

45K Ports

ZTE Combo PON solution won the **“Total Telecom Innovation Award”** at the World Communication Awards (WCA) in London, UK.

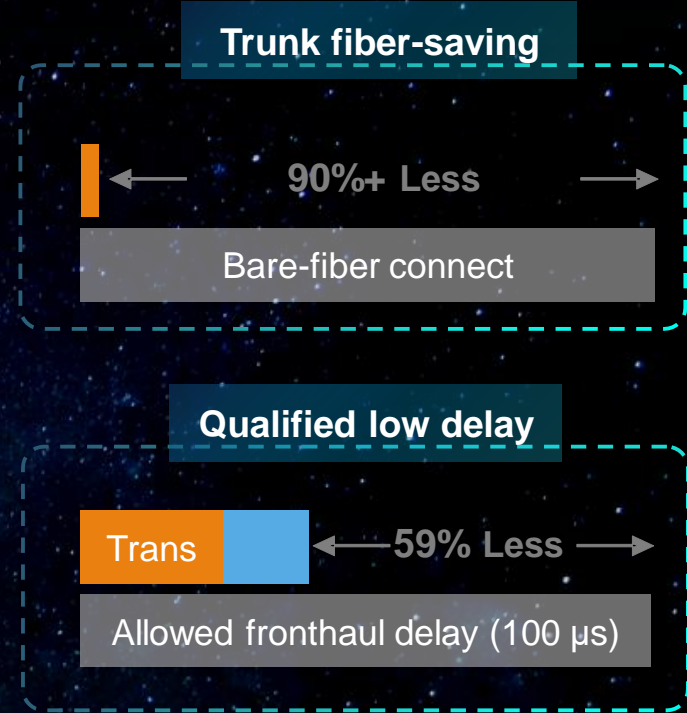

Drive Network **Convergence** to Create More Opportunity

- 5G fronthaul + FTTH share ODN, **saving trunk** fiber and meet the **latency requirement** for 5G fronthaul
- **TDM-like channel** meets uRLLC requirements

WDM-PON Technology is Verified for 5G Fronthaul

Dec 2018, with China Telecom, ZTE completes the industry's first 5G fronthaul verification based on N×25G WDM-PON in Suzhou.

Sharing ODN Resources in FTTH high density area

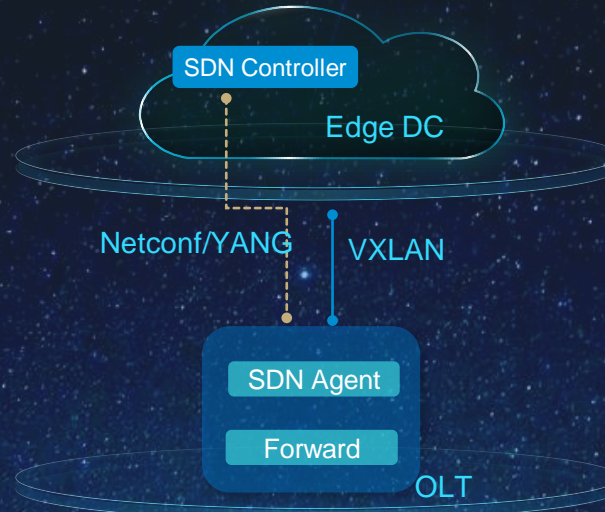

Access Network Evolutions on Demand, Virtualized in Stages

Stage 1 Support network slice function

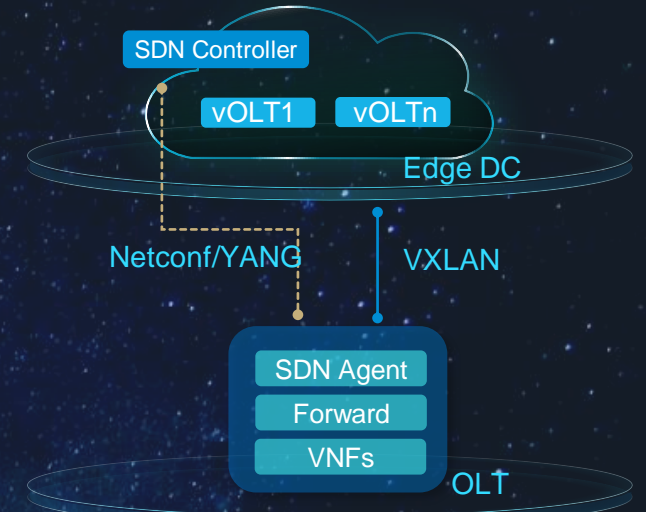

- Different scenarios/users correspond to different network slices, with independent resources, and services are isolated from each other.
- VXLAN seamlessly connects to CO and establishes a large Layer 2 network

Stage 2 SDN, control surface up-shift

- Support SDN Agent, Netconf/YANG
- SDN controller for business dynamic management, open resource allocation capabilities

Stage 3 Access virtualization

- VNF can be shift up to the data center, deployed on demand
- The OLT implements forwarding as a PNF, and can also load part of the VNF.

Built-in Blade to Support MEC

- 15T local storage, 30Gbps processing capability
- 0 extra room space required, 50% reduction in power consumption

- Released **Built-in Blade White Paper** (Feb.2019)
- **Field trial** of vSTB (China Telecom, Jan. 2019)

ZTE NetSphere Wi-Fi Ensure Seamless Coverage at Home

Ready for higher Wi-Fi throughput for home connection, whole home covered network for Smart Home

Net Sphere

- Whole home Wi-Fi
- Plug & Play
- Smart diagnosis
- Smart roaming
- Easy management

- WiFi6 for 10G service
- Band steering/AP steered roaming
- 802.11k/r/v improves performance and user experience
- WiFi Mesh

Worry Free Service Assurance for eXcellence User eXperience

Challenges

Fault Distribution

Big Video@FBB Connection Assurance Solution

Benefits

- **90% less** provisioning time with QR-scanning: From 24 to 2.5 mins.
- **Cloud-based** Wi-Fi optimization: Wi-Fi Complaints reduced.

- **Low-QoE user** identified and optimized: UX improved.
- **Low-quality link** located and fixed: ODN ensured.

Investment for Growth and Leading the Industry to Future
