Sample Use-cases for Healthcare

Deliver Better Patient Care

- Effective Treatment & understanding between healthcare providers and patients from diverse backgrounds, through multilingual medical record.
- Enhanced Patient Doctor Communication, with real time interpretation & translation.
- Enable Patient Registration through speech, resulting in faster TAT.

For Doctors

- Speech to Text Digitization for EMR, Discharge Summary, reduces workload for Doctors and allows to consult more patients.
- Access global medical literature, wide range of clinical studies and findings in their own language.
- Adopt best practices from different healthcare systems

We are compliant with major regulations and standards

Thank You!
