Vision

To monitor and secure the critical infrastructure of every country, shaping a safer, more resilient world.

Mission

To deliver innovative solutions that empower organizations to monitor and secure, critical infrastructure.

tbSLA Manager

Best IT services and support to businesses

tbAPM

Application Performance Monitoring

tbTA

Traffic analysis for network optimization

tbAssetManager

Gives your IT team more visibility and control over common IT problems

tbRMS

Remote monitoring Service for reliability

AIOPs

ITOPs

tbXMS

Network Monitoring and Management platform

tbConfig Manager

Adaptable and comprehensive Service Management solution

tbITSM

plan and manage IT changes in an easy way

BridgePBX

smart routing, effortless conversations, smoother customer journeys.

Unified EMS Platform

01

AI-Powered Platform
(with Gen-AI support)

02

Automation, Pre-Integration
Delivers ~50% efficiency over
competitor

03

'Zero Touch' Network
Operations

OBSERVAX

04

On-premise, hybrid,
Cloud Support

05

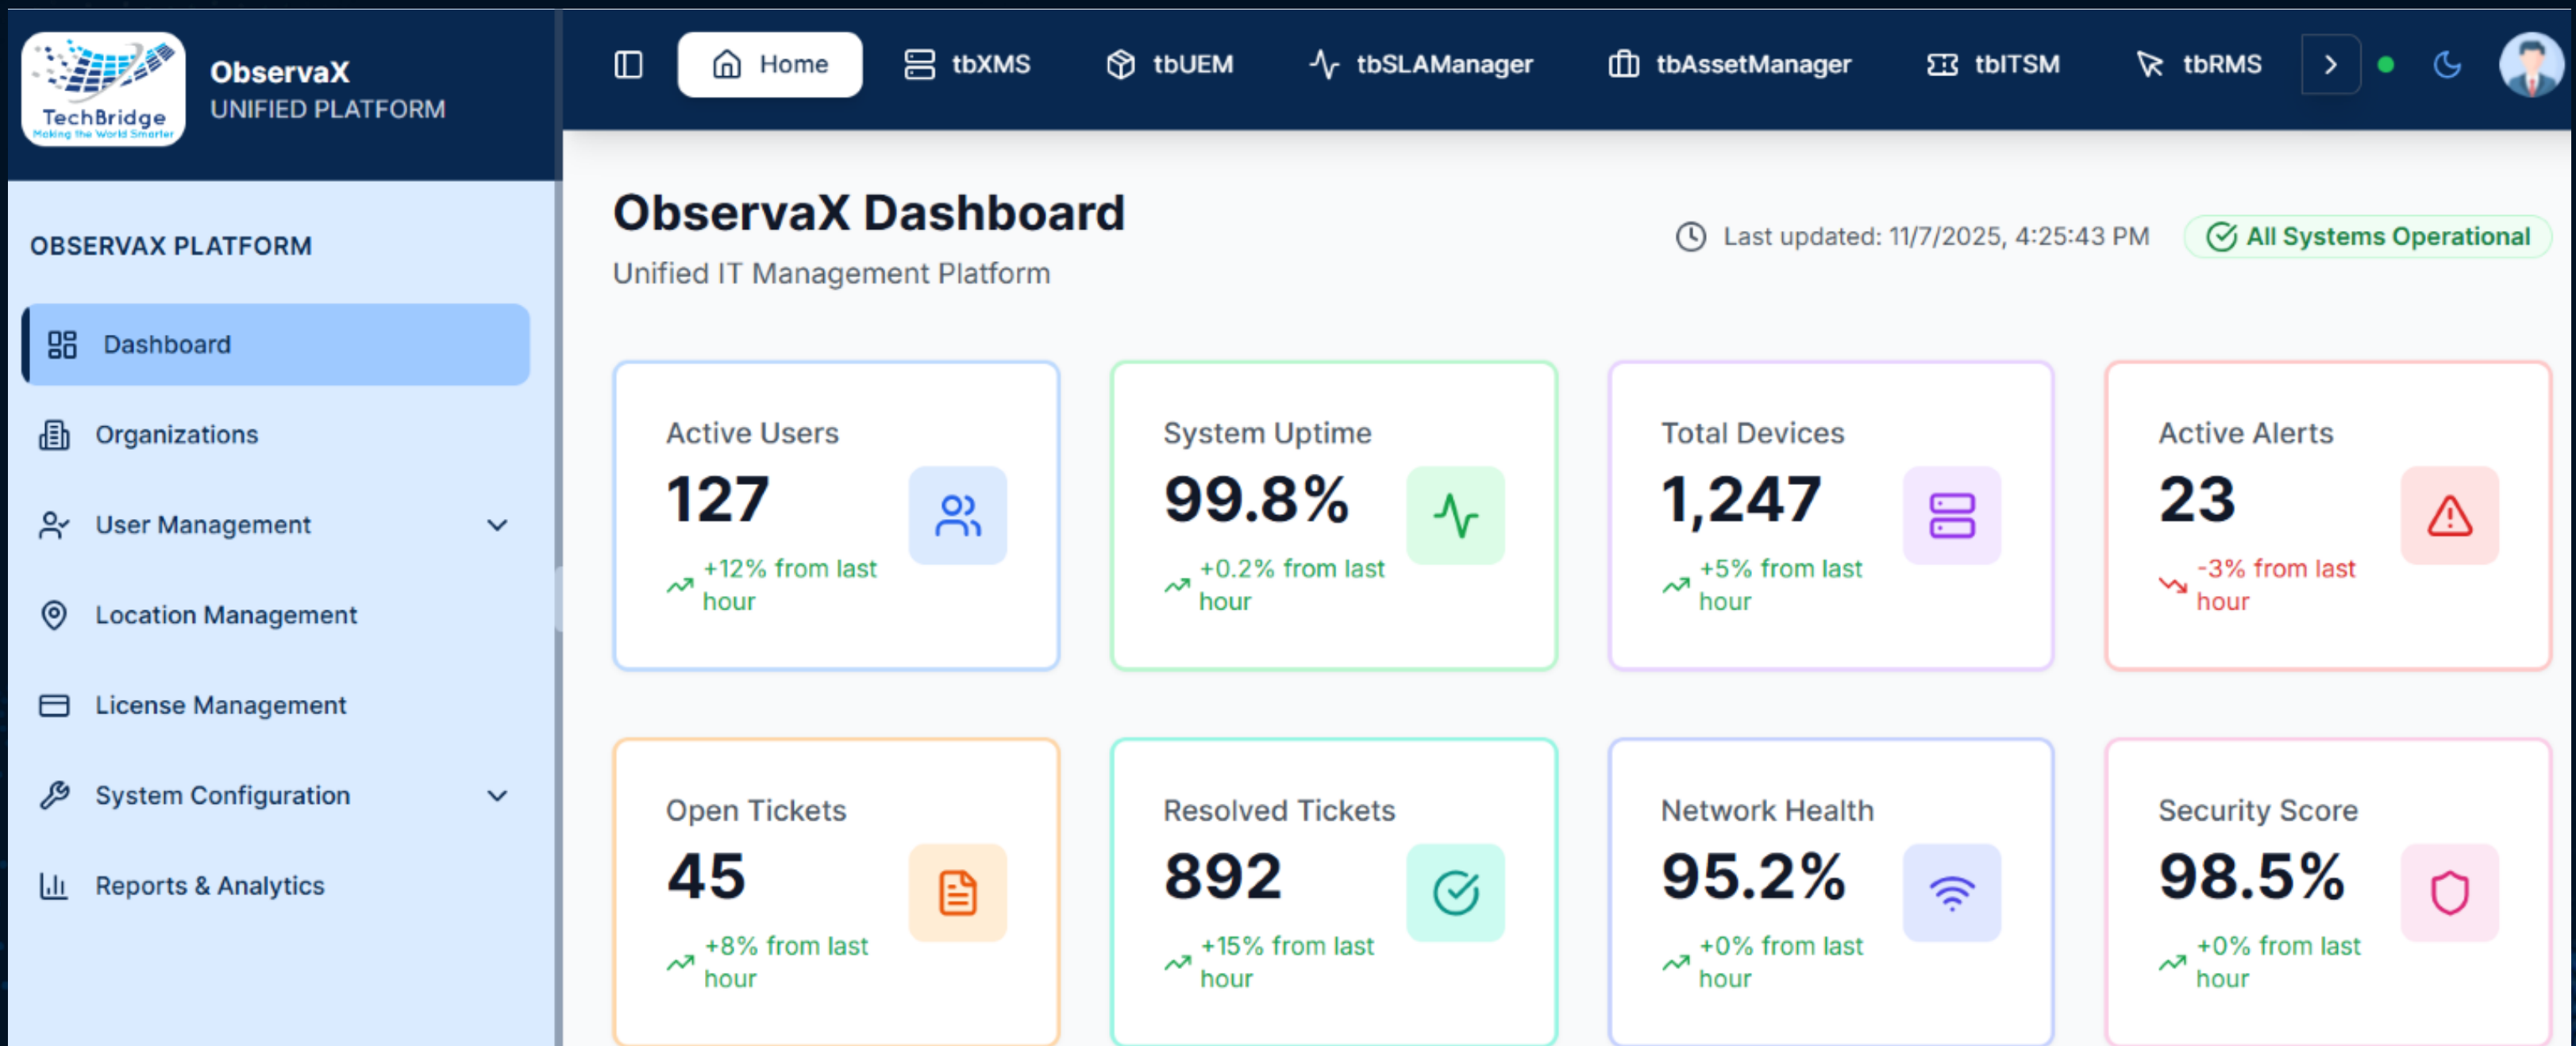

Automated Issue
Resolution

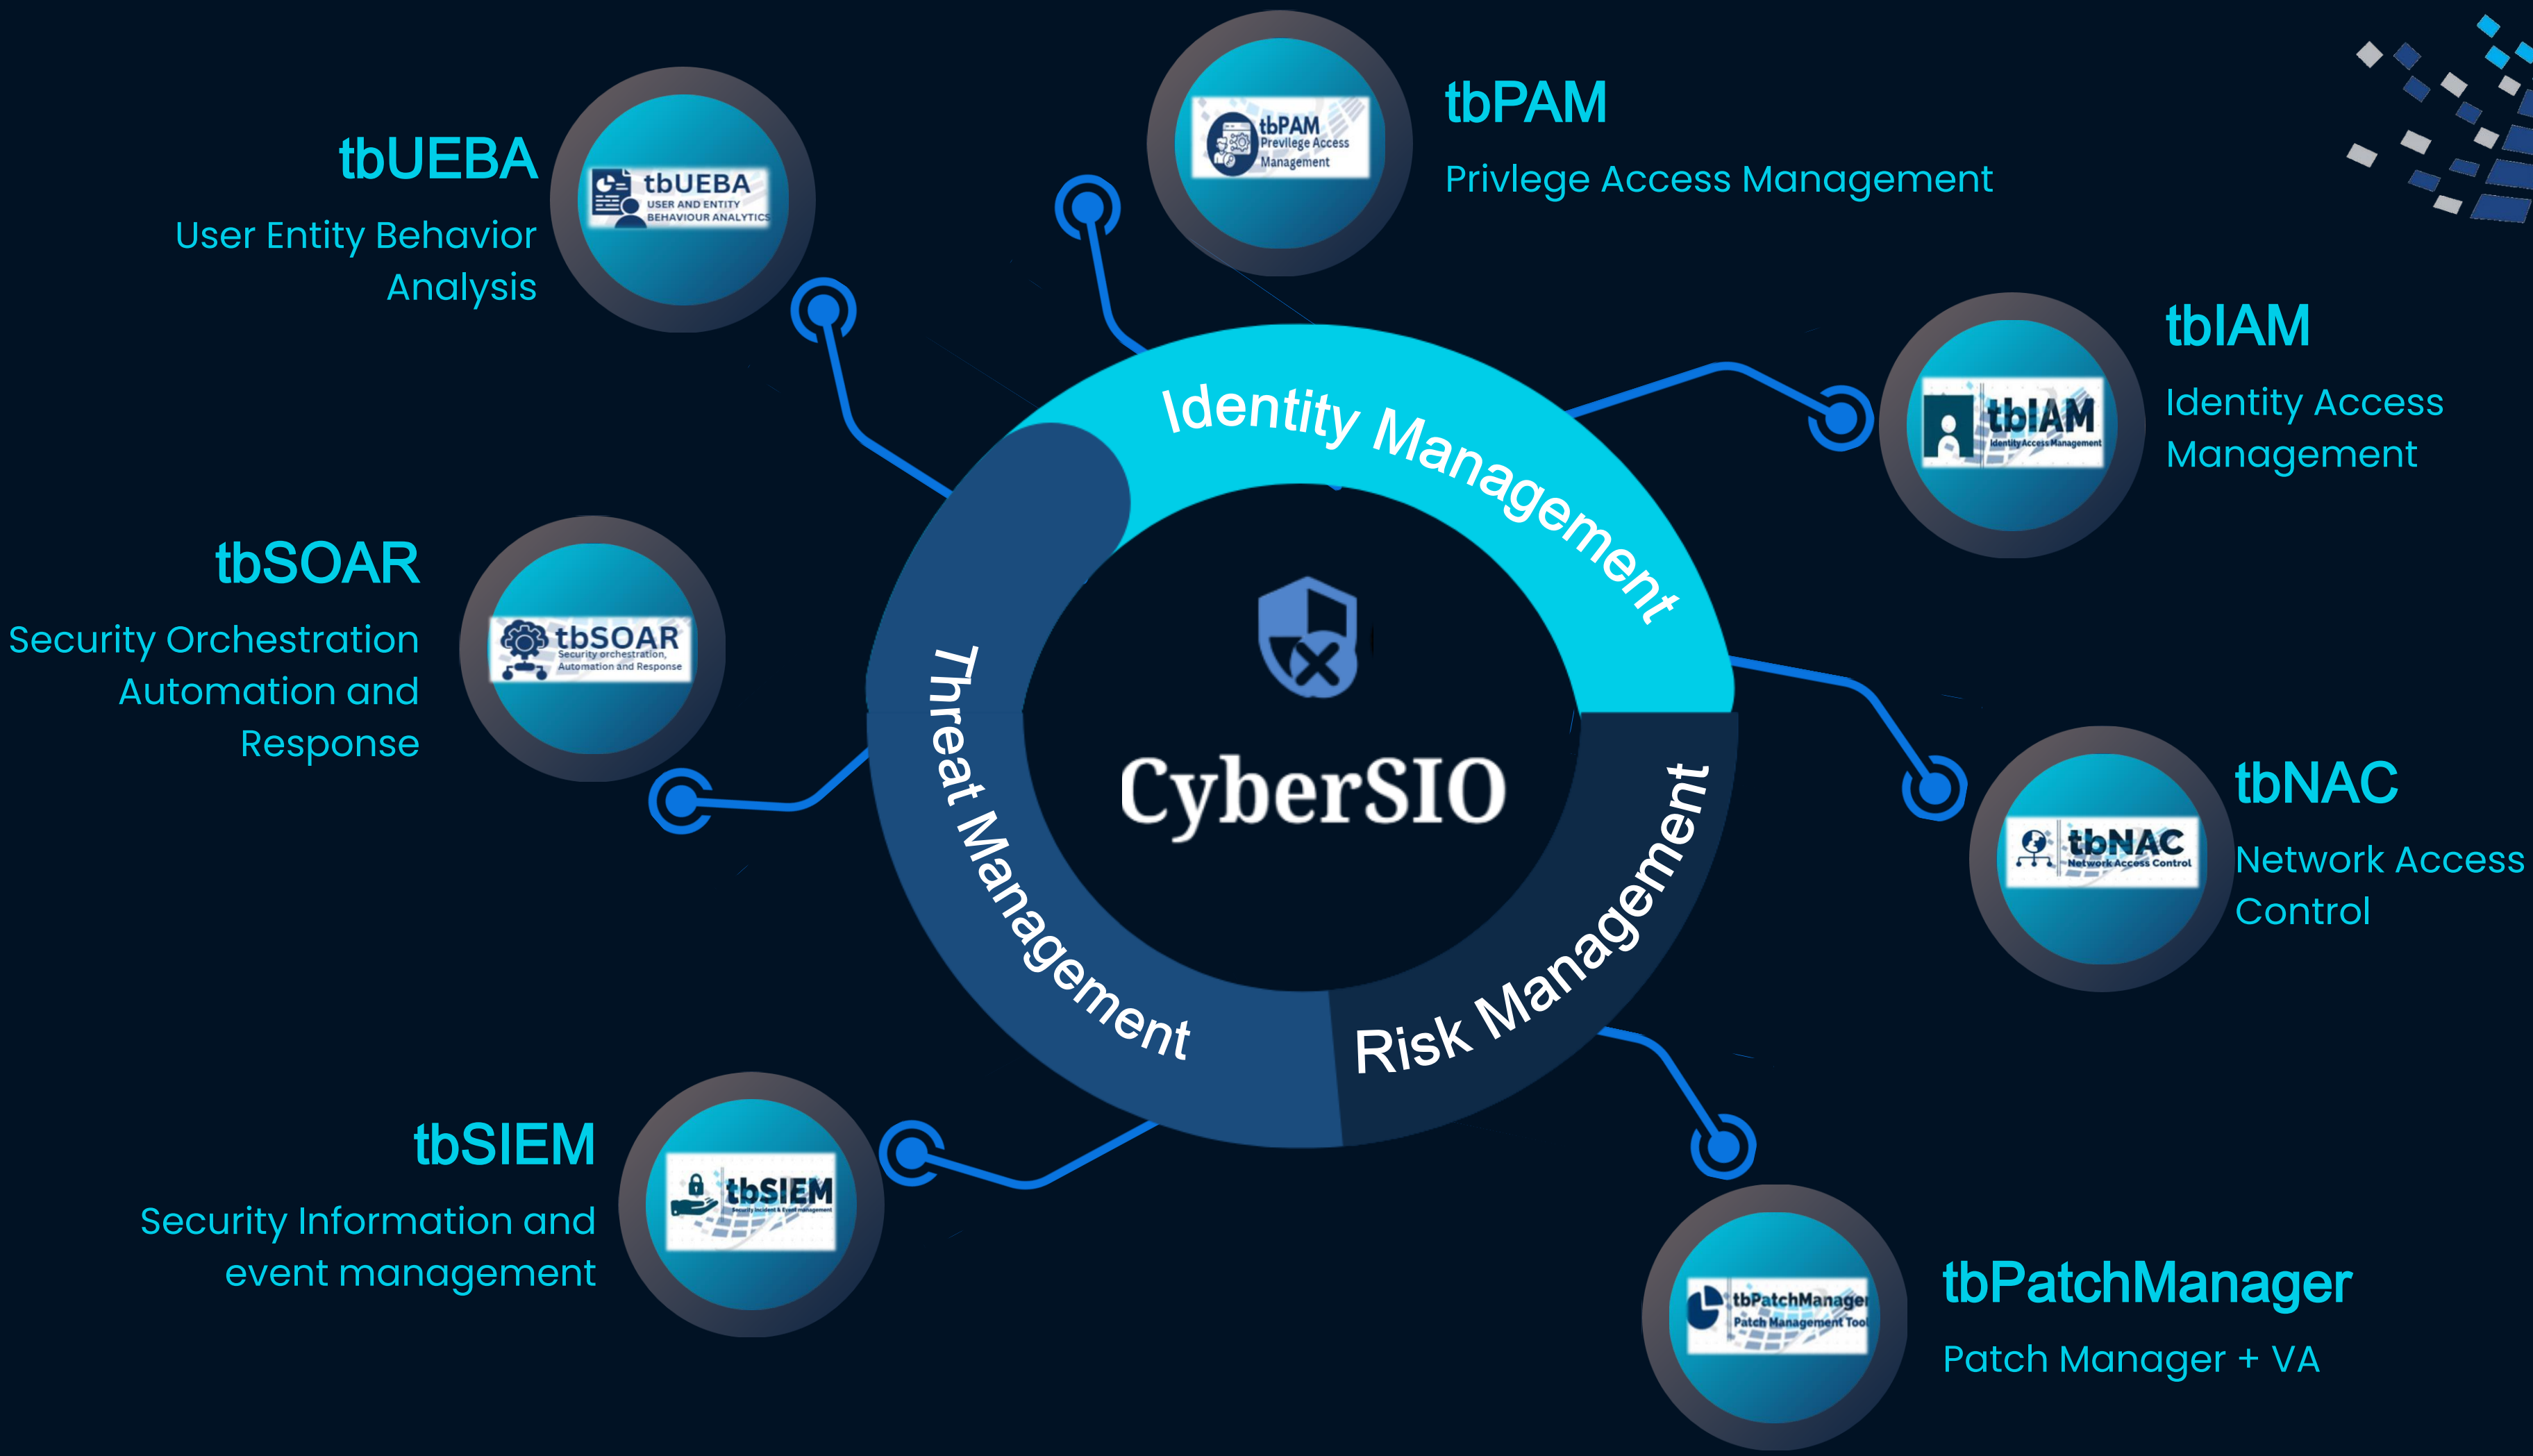

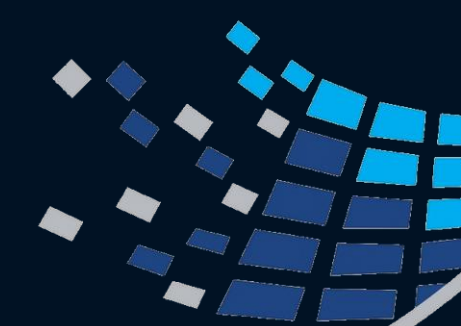

06

Integrates Security
with Asset visibility &
monitoring

ObservaX Platform

Next Gen advanced AIOPs and ITOPs Platform

tbUEBA
User Entity Behavior
Analysis

tbPAM
Privilege Access Management

tbIAM
Identity Access
Management

tbSOAR
Security Orchestration
Automation and
Response

tbNAC
Network Access
Control

tbSIEM
Security Information and
event management

tbPatchManager

TechBridge for Healthcare

Secure, Intelligent Infrastructure for Modern Healthcare
Systems

The Digital Transformation of Healthcare

Healthcare systems are rapidly digitizing, creating unprecedented opportunities for improved patient care. However, this transformation brings significant challenges as IT environments become increasingly complex and vulnerable to security threats.

EHR Everywhere

Telemedicine and remote patient monitoring

Connected medical devices (IoMT)

AI-driven diagnostics and analytics

Cloud-based hospital systems

Key Challenges in Healthcare IT

Operational Challenges

24x7 uptime requirements

Complex multi-vendor infrastructure

Monitoring thousands of medical devices

Fragmented IT and clinical systems

Security Challenges

Ransomware targeting hospitals

Complex multi-vendor infrastructure

Monitoring thousands of medical devices

Fragmented IT and clinical systems

Why Healthcare Needs a Unified Platform

Healthcare IT teams often rely on multiple disconnected tools.

Alert fatigue from multiple systems

Slow incident response times

Limited visibility across systems

Increased operational costs

Healthcare needs:

A unified platform for observability, identity security, and cyber defense.

TechBridge Platform Overview

TechBridge delivers integrated digital operations and cybersecurity platforms designed for mission-critical environments.

ObservaX

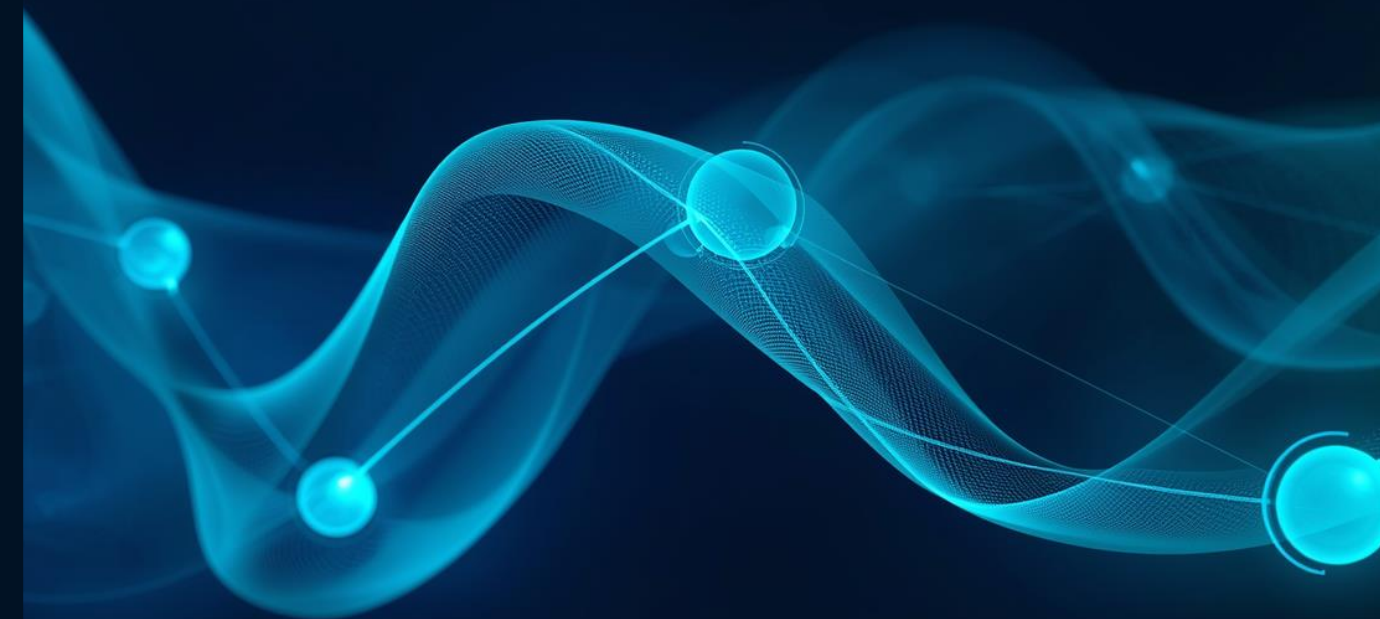

AI-driven IT Operations
and Observability

CyberSIO

SOC-in-a-Box
cybersecurity platform

ObservaX for Healthcare Operations

AI-driven observability for hospital IT infrastructure

Capabilities:

- 01 Infrastructure Monitoring
- 02 Application Performance
- 03 Network Observability
- 04 Alarm Correlation

Example monitored systems:

- 01 EHR platforms
- 02 PACS imaging systems
- 03 Hospital networks
- 04 Cloud infrastructure

Benefits for hospitals:

- 01 Faster detection of system failures
- 02 Reduced downtime in clinical systems
- 03 Improved IT operations efficiency

CyberSIO for Healthcare Security

SOC-in-a-Box platform designed for
healthcare security teams

Capabilities

Identity Threat Detection & Response (ITDR)

Security analytics

Incident investigation

Automated threat response

Unified SOC operations

Benefits

Protection against ransomware attacks

Monitoring clinician identity misuse

Detecting insider threats

Faster SOC investigations

Peace of Mind

Securing Medical Device Ecosystems

Hospitals operate thousands of connected medical devices:

- MRI scanners
- Patient monitoring systems
- Infusion pumps
- Diagnostic equipment

These devices often lack native security.

TechBridge enables

**Network visibility
for medical devices**

**Continuous
behavior monitoring**

**Anomaly detection and
alerts**

**Device misuse
protection**

Identity Security for Clinical Environments

Credential Misuse Detection

Monitor and detect unauthorized use of login credentials across clinical systems. Identify when staff accounts are accessed from unusual locations or devices, protecting patient data integrity.

Privilege Escalation Alerts

Detect when users attempt to gain elevated access beyond their authorized roles. Prevent unauthorized access to sensitive systems by doctors, nurses, administrators, and third-party vendors.

Account Compromise Response

Rapidly identify compromised accounts through behavioral analysis and anomaly detection. Automated response workflows isolate threats before patient data is exposed or systems are breached.

Authentication Monitoring

Track suspicious authentication patterns across your healthcare network. Monitor temporary staff, vendor access, and unusual login times to maintain security across all clinical environments.

Service Continuity

TechBridge ensures healthcare organizations maintain uninterrupted digital services. Our platform delivers the reliability patients and clinicians depend on, minimizing disruptions to critical care delivery systems.

Continuous monitoring of critical systems

Faster incident detection and alerting

Automated response workflows

Reduced Mean Time to Resolve (MTTR)

Reliable digital healthcare services.

Compliance and Governance Support

Healthcare organizations must meet strict regulatory standards.

TechBridge platforms support:

Security monitoring and logging

Audit trails

Risk visibility

Compliance reporting

Applicable frameworks include:

HIPAA

National healthcare data protection laws

ISO 27001

Government cybersecurity mandates

Why Healthcare Organizations Choose TechBridge

Designed for mission-critical environments

Unified operations and security visibility

AI-driven monitoring and analytics

Modular and scalable architecture

TechBridge enables secure, resilient digital healthcare ecosystems.
